THERMAL TARGETS®

R12 - Custom Passive Thermal E-Type

INTERNAL ENERGY THERMAL TARGETS ARE A GREAT TRAINING AID FOR YOU TO ZERO IN YOUR THERMAL SCOPE ON THE RANGE!

These passive targets are an inexpensive way to train without the requirement of a power source.

Just slide the Pullover Sleeve over your E-Type plastic target substrate and you're ready to practice with your new target and hone in your IR optics. The greatest benefit to these Passive targets is that they can be removed and replaced depending on the training requirements at that time.

Your target will appear black or white depending on the contrast setting of your optics. These economical passive thermal targets help prepare you for that critical shot. You can customize any design or shape your team requires.
